

QB1 racing is more than just a team, we make everything as much as possible

even more competitive in our workshop located in Oostende.

We tune our engines, modify our skis and create the designs of them.

Most of the Parts are handmade by Quinten and we also work

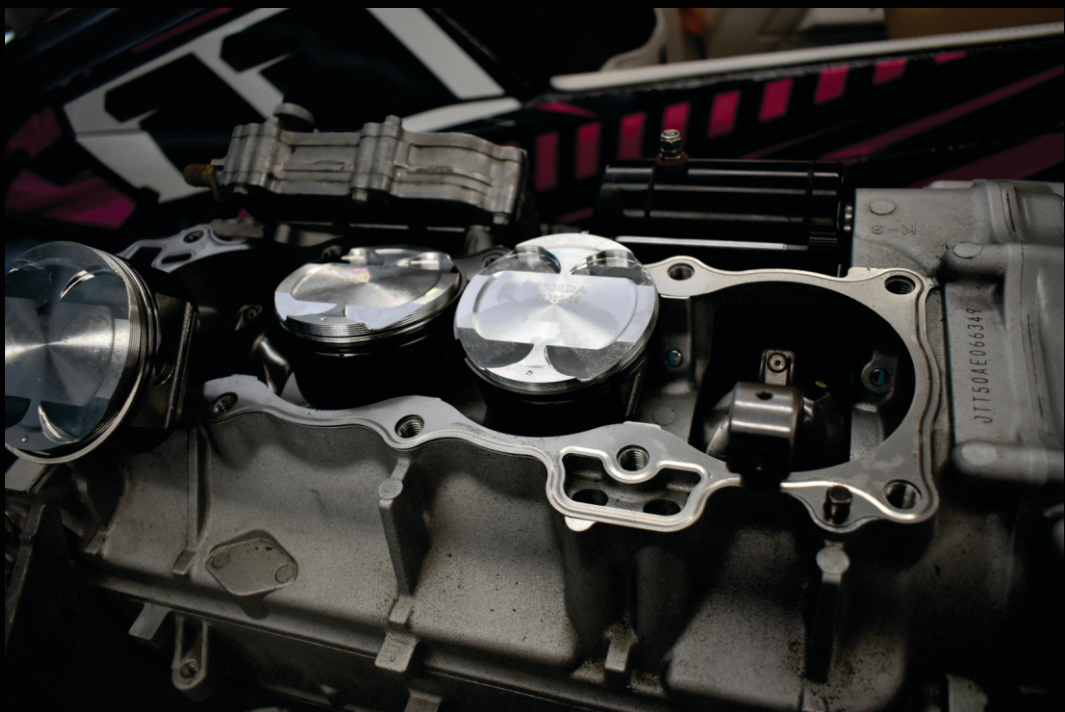

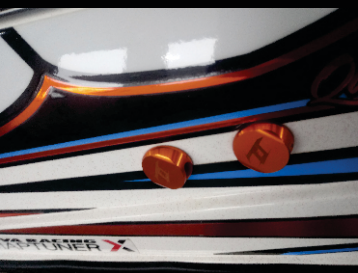

very close with our partners to develop super competitive and reliable parts.

We constantly do research testing and development to dominate the competition.

The next step is to make it possible to share our knowledge with other young talents.

The ultimate goal would be to create a Jet Ski Racing school over here in Oostende

As you can see we don't stop dreaming and are working constantly hard to realize them.

- Engine Tuning and Maintenance.
